

### **The Formula for Quarterly GPA Calculation**

1. Add up all of the grades in all courses in which you will earn 1.0 credit.
2. Multiply this sum by 2.
3. Add up all of the grades in all courses in which you will earn .5 credits.
4. Add the total in step 2 and the total in step 3.
5. Divide this sum by 2.
6. Divide the value in step 5 by the number of credits for which you are *currently enrolled*.
7. The value in step 6 is your unweighted GPA for the quarter.

### **The Formula for Overall GPA Calculation**

1. Add up all of the grades in all courses in which you will earn 1.0 credit.
2. Multiply this sum by 2.
3. Add up all of the grades in all courses in which you will earn .5 credits.
4. Add the total in step 2 and the total in step 3.
5. Divide this sum by 2.
6. Divide the value in step 5 by the number of credits that you have *completed*, regardless of whether you earned the credit or not.
7. The value in step 6 is your unweighted GPA.

To calculate your *weighted* GPA, you must convert all of your grades to weighted scores. Here is how to do that:

1. For all grades of courses with the denotation of “R”, multiply that grade by 1.05. For example, a grade of 80 would therefore become an 84.
2. For all grades of courses with the denotation of “H”, multiply that grade by 1.1. For example, a grade of 80 would therefore become an 88.
3. For all grades of courses with the denotation of “AP” or “C-L”, multiply that grade by 1.15. For example, a grade of 80 would therefore become a 92.
4. All courses with no such denotation would remain unweighted.
5. Repeat steps 1 through 6 above.
